

Don't let data loss destroy your business

More and more businesses are looking for secure, cost-effective online backup. *ITS Online data backup* is the obvious choice. For a start, it's safe. Your data is encrypted before it's sent and stored at secure data centres around the UK with all the latest safeguards in place. Plus it's easy to set up and easy to use. Once the online backup data system is in place, the whole process is automatic so there's no risk of losing data because someone forgot to do the data backup.

70% Of Businesses That Suffer A Major Data Loss Are Out Of Business Within 18 Months. (DTI)

Most businesses understand the importance of the information held on their computers. In reality few companies understand just how little is safely stored. **When was the last time you tested your tape backup?**

What we offer is more than just a place to keep your data safe. Our online backup will help you to keep working, come what may. If your server crashes, for example, you can continue to work on your files, or send and receive email using our remote technology.

Despite the best planning the real situation of backups falls short for many organisations. Our online backup eliminates all the major failures that you may discover too late: corrupt tapes; corrupt data; no data offsite and human error.

Why Switch To ITS Online Backup?

Online Backup is a modern, secure alternative to backup tapes that lets you store and retrieve all your files directly over the internet. ITS Online Backup lets you:

- **Get support and advice** from experienced network and server engineers based in the UK.
- **Encrypt and backup all files**, emails and databases to our secure off-site backup storage data centres.
- **Automatically back up your data** over the internet throughout the day and night.
- **Restore all your data** saved in the past – from a few hours before to a version you kept last year.
- **Carry on working** on your documents over the internet if your server is down for any reason.
